(57) Abstract :

A novel method for the simultaneous estimation of Tipiracil and Trifluridine in pharmaceutical dosage forms has been developed and validated using Reverse-Phase Ultra Performance Liquid Chromatography (RP-UPLC). The method employs a BEH C18 column, with a mobile phase consisting of 30% phosphate buffer (pH 3.5) and 70% methanol, operated at a flow rate of 0.3 mL/min, and a detection wavelength of 251 nm. The retention times for Tipiracil and Trifluridine were found to be approximately 1.913 minutes and 2.838 minutes, respectively. The method was validated for linearity, precision, accuracy, and robustness, ensuring its reliability and reproducibility for pharmaceutical quality control. The developed RP-UPLC method demonstrated excellent separation and quantification capabilities, making it suitable for routine analysis of Tipiracil and Trifluridine in pharmaceutical formulations.

(57) Abstract :

ABSTRACT A SURFACE-MODIFIED SOLID LIPID NANOPARTICLES COMPOSITION OF MEMANTINE HYDROCHLORIDE FOR TARGETED BRAIN DRUG DELIVERY The present invention relates to a pharmaceutical composition and method for preparing surface-modified solid lipid nanoparticles (SMLNs) encapsulating Memantine Hydrochloride for enhanced brain targeting in the treatment of moderate to severe dementia, particularly associated with Alzheimer's disease. The formulation comprises a lipid core of tristearin and soya lecithin, surface-modified with Tween® 80 to facilitate transport across the blood-brain barrier (BBB) via receptor-mediated endocytosis. The nanoparticles are prepared using a modified solvent injection method and optimized through Box-Behnken Design (BBD), ensuring high entrapment efficiency (>70%), narrow particle size distribution (≈185 nm), and sustained drug release up to 36 hours. The SMLNs demonstrated superior stability, compatibility, and in vitro performance, offering a novel, effective alternative to conventional Memantine formulations with reduced side effects and improved therapeutic efficiency in neurodegenerative disorders.

(57) Abstract :
ABSTRACT A POLYHERBAL HAIR MASK FORMULATION FOR ENHANCED ANTIOXIDANT AND ANTI-DANDRUFF ACTIVITY The present invention relates to a polyherbal hair mask formulation exhibiting dual therapeutic functions—anti-dandruff and antioxidant activities—using plant-based ingredients. The composition includes powdered extracts of Catunaregam spinosa, Albizia amara, Rosa sinensis, Eclipta alba, Lawsonia inermis, and Ocimum sanctum. These herbal constituents are combined in defined proportions and blended with water to form a topical paste suitable for scalp application. The formulation is optimized using a Box-Behnken Design (BBD) to achieve maximum antifungal and free-radical scavenging efficacy. Evaluation methods such as reducing power assay and zone of inhibition testing confirm its biological activity. The product is pH-balanced, safe for routine use, non-irritating, and environmentally friendly. This invention offers a natural and sustainable alternative to conventional chemical-based hair treatments for dandruff control and scalp revitalization.
